SAVANNA

Savanna for Law Enforcement Assisted Diversion (LEAD)

Law enforcement organizations across North America are struggling with excessively high incarceration rates and dangerously poor community relations. District and city attorneys are being pushed to reduce incarceration while keeping the public safe.

Communities across North America are considering adoption of Law Enforcement Assisted Diversion (LEAD), a "pre-booking diversion pilot program developed with the community to address low-level drug and prostitution crimes" in Seattle, WA. The success of LEAD depends on buy in and collaboration amongst law enforcement, public officials, and community organizations. While the organizations have different objectives, they have a shared interest in healthy outcomes for willing participants. According to data published by the University of Washington, these healthy outcomes come with considerable legal and incarceration savings. The immeasurable impact on both family and community of rehabilitating drug users into healthy community members is also substantial.
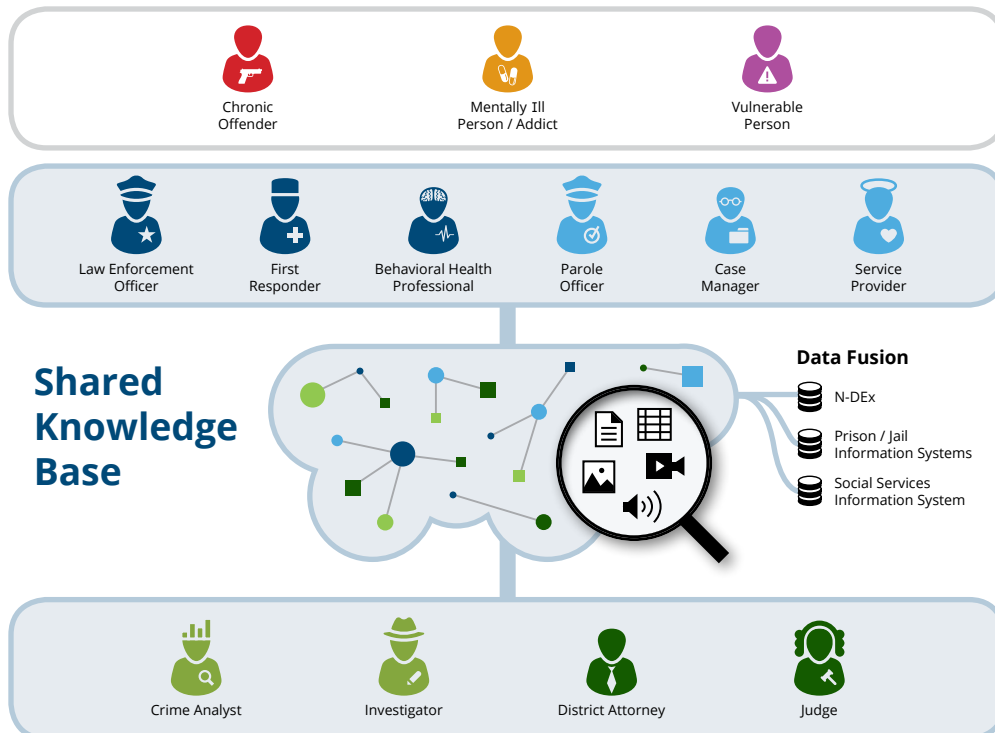

LEAD participants were
58%
less likely to be arrested

For participating organizations to support LEAD, they need associated processes, case managers, and services for participants. They also need underlying case and knowledge management software that supports collaborative yet filtered use of sensitive data across organizations.

Savanna delivers the needed case and knowledge management capabilities.

Savanna brings together LEAD program participants with existing and new data to collaborate using sensitive case information. Participants access views of information based on program policies and data use is tracked and reported to ensure that civil liberties are upheld.

SAVANNA

Complex investigations demand that dispersed teams move nimbly, pulling from diverse data sources to develop and document cases.

Savanna simplifies collaboration and case management by accessing all relevant information, from any source, into one portal. Teams gain easy access to the data and can adapt and share their models as events develop, then build and present comprehensive, convincing narratives so the case can move forward.

Secure information sharing

Savanna's cloud-based platform is accessible from any web browser. Our sharing and privacy features let you set up teams according to your organization's preference, so that members who are widely distributed organizationally or geographically can quickly share critical information.

Any source, any format

Savanna makes it easy to find and use data created in different applications, or formatted inconsistently, by accepting and displaying a wide variety of common file formats for video, text, images, and databases. Our customizable plugins can connect to specialized databases and present their content as a flexible human-readable document.

Custom dossiers evolve and adapt

Savanna lets you build custom templates to better describe your findings. They hold all of the data fields that your team wants, and leave out extraneous information. This means that data on new or evolving programs, like Law Enforcement Assisted Diversion (LEAD), doesn't get lost just because it doesn't fit an existing model.
